

PLAN 1070: Platform Analytics 7.x Administration Course

Duration: 3 Days

The Platform Analytics course is designed to enhance the ability of administrators, analysts and project management to effectively utilize the product as applicable in their business areas to ensure systems operate more efficiently. It will allow users to assist engineering managers to estimate project completion times, provision hardware and licenses more accurately, ensuring project priorities are being met across large Platform LSF clusters and multiple sites around the world.

Who Should Attend

The Platform Analytics 7.x Administration Course has been developed for administrators responsible for supporting an LSF Analytics implementation, analysts responsible for producing operational reports and project managers who need to understand operational performances.

Course Pre-requisites

Attendees should:

- Be familiar with UNIX/Linux and have basic Unix/Linux system administration experience
- Be familiar with LSF/FlexLM license servers
- Have an understanding of SQL

Course Materials

All participants will receive a copy of the training manual and workshops
