

Platform LSF 6.1 License Scheduler Course

Duration: 2 days

Platform LSF License Scheduler 6.1 - The Intelligent, policy-driven application license optimization for Platform LSF clusters

Platform LSF License Scheduler optimizes the usage of all application licenses across Platform LSF clusters by allocating a virtualized pool of licenses to users based on an organization's established distribution policy. Using Platform LSF License Scheduler, organizations can realize dramatic reductions in additional application license purchases and increase overall access to license resources.

Who Should Attend

The Platform LSF License Scheduler 6.1 course has been developed for License administrators to manage and optimize the usage of licenses in the virtual pool belonging to the organization.
