

## Platform Open Cluster Stack (OCS) Advanced Configuration & Administration

### Duration: 2 Days

Our Platform OCS Advanced Configuration & Administration course is designed to extend the system administrator's knowledge to include advanced Platform OCS functionality and commands to configure and enhance the current cluster design. The workshops provide valuable experience with advanced installation topics, PXE booting, Platform OCS Kickstart process, managing and creating Rolls and advanced LSF HPC job submissions. The system administrator will also learn helpful hints and tips and develop fundamental troubleshooting skills.

### Who Should Attend

The Platform OCS Advanced Configuration & Administration course has been developed for system administrators and advanced end-users who are responsible in extending the role of Platform OCS.

### Course Pre-requisite

Attendees should be familiar with UNIX/Linux, basic UNIX/Linux system administration experience and some exposure to Beowulf style clusters.

### Course Content

This course covers the following:

#### Concepts & Commands

- Platform OCS advanced installations
- Platform OCS kickstart
- PXE boot

#### Administration

- Platform OCS appliances
- Upgrading Platform OCS
- Platform OCS Rolls
- Platform LSF HPC with Linpack
