

Platform Open Cluster Stack (OCS) 4.x Basic Configuration & Administration - Virtual

Duration: 3 Days

Platform OCS Basic Configuration & Administration course is designed to give you the knowledge required to deploy and administer Platform OCS in your working environment. You will gain a solid understanding of the OCS philosophy, how to install Platform OCS and how to manage Platform OCS. You will get valuable hands-on experience with Platform OCS installation, cluster configuration and administration, and learn how to take full advantage of the available high-performance network interconnects on your clustered systems. You will also learn helpful hints and tips and develop fundamental troubleshooting skills. A separate section will be presented so that the student will be able to understand Platform workload management. An explanation of Platform Lava core behavior is analyzed, and demonstrations of standard commands to show proper cluster behavior are conducted.

Who Should Attend

The Platform OCS Basic Configuration & Administration course has been developed for system administrators and users who will be responsible for deploying a cluster with Platform OCS.

Course Pre-requisite

Attendees should be familiar with UNIX/Linux, basic UNIX/Linux system administration experience and some exposure to Beowulf style clusters.

Course Content

This course covers the following:

Concepts & Commands

- Platform OCS concepts & terminology
- Platform OCS installation

Administration

- Platform OCS Architecture
- Platform OCS Configuration
- Platform LAVA Overview
- Troubleshooting
